

REQUIRED LICENSES FOR SOLAR INSTALLATION IN SOUTH CAROLINA

The South Carolina Board of Labor, Licensing and Review requires the licenses and certifications outlined below for solar installations. For information on obtaining these licenses, as well as information about reciprocity with other states, please visit:

<http://www.llronline.com/POL/Contractors/index.asp?file=licensure.htm> or <http://www.llronline.com/POL/ResidentialBuilders/index.asp?file=licensure.htm>

Additionally, each local city, town or county may require a business license to conduct business within that jurisdiction.

Note that the commercial contracting company must hold a license that covers 40% or more of the regulated work to be the prime contractor. The prime contractor can subcontract the remaining regulated work to properly licensed subcontractors. A Residential contracting company must be licensed as required for all aspects of the residential work. Please be aware that performing, or offering to perform, solar installations without these licenses may result in penalties.
